Helping others save lives

Books and Guides

Lost Person Behaviour

Written by Robert Koester

\$47.00

The purpose of this book is simple: To help searchers look in the right place to find lost subjects faster.

Based upon a landmark study, this book is the definitive guide to solving the puzzle of where a lost person might be found. Nowhere else is it possible to learn about the latest subject categories, behavioural profiles, up to date statistics, suggested initial tasks, and investigative questions. Whether the subject is underground,

underwater, under collapsed rubble, on land or has fallen from the sky, this book delivers what search managers need.

SARINZ personnel have provided subject matter expertise and data from New Zealand's SAR operations underpin the theoretical and practical nature of the research and book.

416 pages, semi-concealed wiro-o binding, A5 format
Price: \$47.00

Alpine Rescue Techniques (3rd edition)

Written by Grant Prattley

\$72.00

Alpine Rescue Techniques is a technical rescue manual covering vertical rope rescue and rigging principles. An easy-to-read format, use of diagrams and focus on practical scenarios ensures ART is relevant for beginners and professionals operating in steep and vertical alpine terrain (as well as cliffs and caves).

Drawing on the previous edition's practical emphasis, this edition questions - is there a better way? The techniques and principles put forth are not new but presented to encourage debate, discussion and reflection.

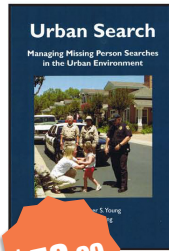

Focussing primarily on rope rescue techniques and principles, this edition reflects the changing nature of alpine rescue (and other vertical terrain). Rewritten chapters include Avalanche SAR and First Aid, and new chapters on Incident Management and Helicopter Rescue.

This manual has been written by Grant Prattley (SARINZ) and published in conjunction with LandSAR (NZ) and the Mountain Safety Council.

350 pages, A5 paperback
Price: \$72.00

Urban Search: Managing Missing Person Searches in the Urban Environment

Written by Christopher S. Young and John Wehring

\$52.00

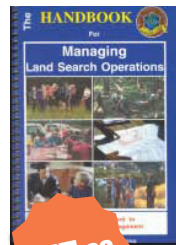

This book is the first comprehensive guide to urban search. It compares factors of an urban/suburban incident with wilderness search, including preplanning, search management, special investigation considerations, use of resources, and documentation.

Contributors include Kimberly R. Kelly, Robert J. Koester, and Michael St. John.

352 pages, A5 paperback
Price: \$52.00

Managing Land Search Operations (MLSO)

Written & Edited by Robert C. Stoffel

\$77.00

This is a completely rewritten, and reorganized textbook for the course "Managing Land Search Operations." This book takes the place of the original document "Search is An Emergency" initially published by the Emergency Response Institute and later by Emergency Response International. The foundation material contained in this book has been the cornerstone for land search coordinators for over three decades in thirteen countries.

Spiral bound, 540 pages, 3-hole punched and in A4 format.
Price: \$77.00

Search Wheel - An Initial Response Search Guide

Designed by SARINZ in conjunction with Robert Koester

\$21.00

The Search Wheel leads students or experienced search planners through the initial response phase of the search. It is lightweight, durable, and waterproof.

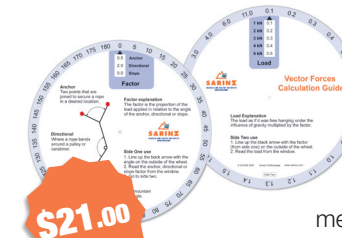

Side One provides handy information on the steps needed to commit to a search effort and then deploy resources. Simply rotate the search wheel to tackle each critical topic. Side two presents essential information and behaviour profiles for the most common lost subject categories.

Data has been taken from the International Search & Rescue Incident Database (ISRID) which contains 50,000 SAR incidents.

Metric (km) lightweight, waterproof plastic
Price: \$21.00

Vector Forces Calculation Guide (VFCG)

Designed and produced by SARINZ

\$21.00

The VFCG enhances the safe and efficient engineering of temporary rigging systems by increasing and developing your knowledge of what forces are being applied. Unlike any previous approach the VFCG uses a whole system methodology including anchor, directional and slope forces.

The VFCG can be used for any type of rigging including rescue, ropes courses, guiding, adventure racing, abseiling, climbing, caving, film crew, industrial, tower and many more. A user guide is available online in PDF format with information and examples on how to use the guide and exercises for you to complete.

Lightweight, waterproof plastic
Price: \$21.00

ABOUT SARINZ

The Search and Rescue Institute New Zealand (SARINZ) is an international centre of search and rescue (SAR) excellence supporting SAR in its efforts to save lives in back country, rural, urban, coastal or workplace environs.

The purposes of SARINZ are to further the education of the public of NZ in matters related to search and rescue. To provide education, training and assessment for the purposes of developing and retaining an internationally credible, effective and efficient search capability and rescue capability throughout NZ.

SARINZ is proactive in developing, sourcing and providing SAR practitioners with access to SAR resources to help them save lives. We produce, publish or promote these resources because we use them and we know they work.

SARINZ is a registered charitable organisation and is New Zealand's international training centre of search and rescue excellence.
